[General](#) Software Update

 **iOS 11.4 Developer beta 3**
Apple Inc.
191.2 MB

This beta version of iOS 11.4 contains bug fixes and improvements.

For more information, visit:
<https://developer.apple.com/go/?id=ios-11.4-sdk-rn>

This beta version of iOS should only be deployed on devices dedicated for iOS 11.4 beta software development.

[Download and Install](#)

Ios 13 developer beta 2 profile download.

Dos semanas después de la llegada de la primera beta de iOS 13 en la WWDC19, Apple ha lanzado una segunda versión que pule gran parte de los errores que teníamos en la primera. La segunda beta de iOS 13 viene acompañada del resto de segundas betas: macOS Catalina beta 2, watchOS 6 beta 2, iPadOS 13 beta 2 y tvOS 13 beta 2. Las nuevas betas están desplegándose paulatinamente a todos los dispositivos que tengan instalada la primera de las betas. Al tratarse de betas para desarrolladores tan sólo están disponibles en dispositivos registrados como desarrollador. Además si no se dispone de la primera beta hay que instalarla de forma manual con iTunes y Xcode en conjunto. ¿Cuáles son los cambios en la beta? Apple no publica una lista oficial de los cambios realizados, tan sólo en las versiones finales. Los diferentes errores encontrados por parte de los desarrolladores estas últimas dos semanas han servido para que Apple vaya puliendo el sistema. A medida que vayamos descubriendo los cambios iremos actualizando este artículo. Estos son algunos de momento: La app cámara tiene el nuevo efecto High Key Light Mono y permite ajustar la intensidad de la luz. Hay nuevos stickers de memojis con dedos cruzados, en señal de victoria y más. Mejoras en la interfaz de Calendario. La conexión vía SMB ya funciona en Archivos. tvOS 13 incluye soporte para imagen dentro de imagen. Si ya disponías de iOS 13 en su primera beta y tenías el perfil para desarrollador instalado en el dispositivo la actualización aparecerá de forma automática, lo mismo ocurre con iPadOS 13. En cuanto a macOS, watchOS y tvOS no se requiere de nada si ya disponías de la primera beta, saltará vía OTA la nueva beta. ¿Cuándo llegan las betas públicas? Siguiendo con el calendario al que Apple nos tiene acostumbrados, es más que probable que sea a mediados de julio cuando veamos la primera beta pública para los usuarios no desarrolladores. Durante la WWDC19 la compañía indicó que las betas públicas llegarán en julio, aunque no especificó la fecha exacta. ¿9 de julio? ¿16 de julio? En cualquier caso durante el próximo mes. Los usuarios que quieran probar esta beta pública y no sean desarrolladores deberán inscribirse en el programa de betas públicas de Apple para recibirlas. Para todos los demás que quieran esperar a la versión final, tendrá que ser en otoño. Seguramente una semana después de la presentación de los nuevos iPhone. Dominik Tomaszewski / Foundry There are some great new features in iOS 16, including new lock screen customisation, an improved notifications feed including Live Activities and better parental controls. It's available to try in beta form right now ahead of the full release later this year. Here's all you need to know about the iOS 16 beta, including how to download and install it right now and the risks involved. For more on the upcoming software update, take a look at the latest iOS 16 news. Can I download and install iOS 16 on my iPhone? As long as you have an iPhone 8 or later, you can try out iOS 16. Apple runs a free public beta program for those keen to trial iOS 16 ahead of its official release later this year, and the first beta was made available on 11 July 2022. Just to confirm, here are all the devices which can get iOS 16: iPhone SE (third-generation)iPhone 13 Pro MaxiPhone 13 ProiPhone 13iPhone 13 MiniiPhone 12 Pro MaxiPhone 12 ProiPhone 12iPhone 12 MiniiPhone SE (second-gen)iPhone 11iPhone 11 ProiPhone 11 Pro MaxiPhone XSiPhone XS MaxiPhone XRiPhone XiPhone 8iPhone 8 PlusApple The risks of installing beta software Before we explain how to download beta versions of iOS on your iPhone, we need to first explain the situation with beta software. For those unaware, betas are unfinished, and that means you'll likely run into bugs, glitches and even crashes that leave you locked out of various areas of your smartphone. In other words, don't expect the iOS 16 beta to be as stable as Apple's current software. That can be true not only of the iPhone software itself, but the apps you've got installed – some may work perfectly in iOS 15, but crash upon opening in iOS 16. If you do decide to take the plunge, we can't stress how important it is to back up your iPhone using an archived backup prior to the upgrade. Without an archived backup, you won't be able to restore from a backup if you decide to go back to iOS 15, due to Apple not supporting restore data from newer software updates. Essentially, if you back up your iPhone running iOS 16, you won't be able to restore from that backup if you want to go back to iOS 15. To archive a backup, open iTunes (or Finder in macOS Big Sur), and click Preferences > Devices. You'll then see a list of all your backups – right-click your most recent backup and select Archive to save it from being overwritten. Apple How to install the iOS 16 Public Beta Anyone can do this: it's perfectly legitimate, not breaking any rules and not a secret. Make sure you read the warnings above before installing, though. Dominik Tomaszewski / Foundry On your iPhone, in the Safari web browser, head to beta.apple.com.Scroll down and tap Sign Up. (Only tap Sign In if you have previously registered to get beta versions of iOS.)Enter your Apple ID – this may be as simple as using Face ID if you have a newer iPhone.Scroll down the page and in the Get Started section, tap the 'enrol your iOS device' link (shown above).Scroll down and tap the 'Download profile' buttonYou'll see a pop-up appear asking whether you want to download the profile to your iPhone. Click Accept.Head to the Settings app and tap Profile Downloaded just below your Apple ID.Tap Install in the top-right corner to install the iOS 16 beta profile.Agree to the developer consent form.Restart your iPhone to finish installing the beta profile.Once restarted, go back to the Settings app and head to General > Software Update.You should see the iOS 16 beta appear – tap Download and Install, and wait for your iPhone to download the update.Once downloaded, you'll see a pop-up appear asking to install the update. Tap Install to install the iOS 16 beta update.Related content We're happy to reveal that iOS 13 beta 2 or iPadOS 13 beta 2 can be downloaded without a developer account on iPhone, iPad, iPod touch. When Apple released the first betas of iOS 13 and iPadOS 13, we were somewhat left in shock that the update was available as a full IPSW for clean installation only and the over the air method was nowhere to be seen. It's understandable, because loads of people jump onboard to try out the new software and the initial release was nothing but a hot buggy mess compared to the second one. Now, Apple is widening the scope of the iOS 13 and iPadOS 13 beta updates and those with a registered account with Apple can go ahead and download the new firmware without having to download the complete IPSW file. This means that you just have to download a profile onto your device and you're good to go. However, even that method will set you back money until or unless you're ready to wait a few more weeks for the public beta to arrive which is free. That's not how we work, though. Today, you can download and install iOS 13 beta 2 or iPadOS 13 beta 2 without signing up with Apple. It's a simple case of downloading this profile [download link] onto your iPhone, iPad, iPod touch and then downloading the update from Settings > General > Software Update. However, before you go ahead, make sure that you have backed up everything to iCloud or iTunes just in case. This method will not wipe anything from your device and will simply update what's already on it to iOS 13 beta 2 or iPadOS 13 beta 2 without deleting anything. It's still a good idea to take a backup, since you never know when things might go south. I know you're feeling adventurous and want to try out iOS 13 beta or iPadOS 13 beta ahead of everyone else. But please, I would still recommend waiting for the public beta to arrive next month. It will be a far more stable firmware which will be available to an even broader audience. But of course, what you choose to do here is entirely your call. Make sure you check out the following guides as well: To update the software on Apple Watch, you'll need to: Make sure your Apple Watch has at least a 50 percent charge. Connect your iPhone to Wi-Fi. Keep your iPhone next to your Apple Watch to make sure they're in range. Make sure your iPhone is running iOS 14 beta. Download the configuration profile from the download page. On your iPhone: Download the configuration profile directly onto your iPhone and follow the installation instructions. On your Mac or PC: Save the file to your hard disk and email it to an account on your iPhone. Tap the configuration profile in Mail and follow the installation instructions. After launching the profile, tap Apple Watch as the installation location and reboot when prompted. On your iPhone, open the Apple Watch app and tap My Watch > General > Software Update. If prompted for your iPhone passcode or Apple Watch passcode, enter the passcode. Wait for the Apple logo and progress bar to appear. When the update is done, your Apple Watch will restart. Make sure to enable Developer Mode on your device. This will let you grant permission to run locally-installed apps on these platforms – for example, when you perform a build-and-run in Xcode or install an .ipa file with Apple Configurator. If your Apple Watch displays a red "!" icon, force restart your Apple Watch. Simultaneously hold the side button and Digital Crown for at least 10 seconds, then release when you see the Apple logo. If force restarting your Apple Watch doesn't resolve the issue, or if your Apple Watch restarts in recovery mode or exhibits other issues that require it to be restored with the current version of watchOS, you may need to send it in to Apple to be serviced. Apple Authorized Service Providers and Apple retail stores cannot perform this service. Once your device is received, it may take up to three business days to be serviced. You will get back the same device you send in. This service is currently available in Australia, Canada, France, Germany, Italy, Japan, Switzerland, United Kingdom, and United States. To get started, contact us. Feedback Assistant If you encounter any problems with beta software or if you would like to request enhancements to frameworks or API, please submit a report through Feedback Assistant. Make sure to include the build number in the bug title and description so your issue can be processed quickly.View Feedback Assistant Apple Beta Software Program The iOS and macOS public betas available through the Apple Beta Software Program come with the built-in Feedback Assistant app. If you're running the tvOS public beta, you can submit feedback through the Feedback Assistant app on an enrolled iOS device. When you experience an issue or something doesn't work as expected, send your feedback directly to Apple with Feedback Assistant.Learn more about the Apple Beta Software Program Apple Developer Forums You can visit the forums to find information or post about issues you encounter during app development.View discussions
